

CAPEX Inventory Scanning In WOS

Purpose

This document outlines the procedure for scanning monthly CAPEX inventory counts into the Work Order System.

Tools Needed

Malacriy USB Wireless Barcode Scanner

Tablet or Laptop

Procedure

CAPEX parts are scanned and entered into the work order system by scanning:

- The barcode of the designated part for non-serialized parts
- The barcode of the designated part and the serial number for serialized parts

Parts to be scanned and the scanning method of those parts will be determined and communicated to the Field prior to the opening of the scanning window.

Please note: all serial numbers for serialized scanning must have been entered into the system prior to the scanning the part. Serial numbers that have not been entered into the system will not be available for entry.

1. Open the Parts Inventory Tracker [here](#).
 - Ensure that you are scanning in an open scanning window.

A screenshot of a web application titled 'Parts Inventory Tracker'. The interface has a blue header with a barcode icon and the title. Below the header, there are two fields: 'Current Scan Window:' with the value 'March 2019' and 'Window Closes On:' with the value '3/25/2019 11:59:00 PM'. Below these fields is a section titled 'Your Completed Scans:' which contains a table with four columns: 'Condition ^', 'Location', 'Warehouse ID', and 'Trunk Owner ID'. The table is currently empty. At the bottom of the interface, there is a prompt: 'Please select the type of inventory you'll be scanning.'

2. Select the condition type:
 - Local warehouse
 - Trunk

3. Choose the Location Type.
 - Local warehouse
 - Trunk

4. Select the appropriate warehouse for which you are placing the count. If this is your designated warehouse, press the My Warehouse button.

5. Press Begin Scan

6. A table with a list of scannable parts is located at the bottom of the scanning table.

- The bottom table indicates parts that should be in your inventory and are available to scan, but have not been scanned into the tracker. Should you find items in this table, please search your physical inventory to ensure that all items have been scanned and the counts are correct.
- If a recount is needed, press cancel and make any necessary corrections.
- If the inventory count is correct, press Confirm.
- Pressing Confirm will submit your count.
